

If you are looking to get more out of your Whyville classroom experience, consider registering your email account with us. By registering you'll get access to some additional resources, including guides and videos. These resources have three main purposes. First, they can help you quickly discover which Whyville activities are a good fit for your classroom. Second, they help save you time so that you don't have to spend hours searching through Whyville on your own. Finally, by highlighting areas which we believe have strong academic connections, these resources will assist you in designing your own lesson plans for use in the classroom!

What do I get?

For each subject matter area - arts & humanities, earth sciences, English & language arts, life sciences, mathematics, and physical sciences – you'll receive access to a PDF guide and a short video.

PDF Guide:

The PDF guide contains short descriptions of each activity, listed sponsors, subject matter subcategories, any special category, and the location within Whyville. These guides can help you quickly locate appropriate activities for your classroom!

Video Tour:

You'll also be able to view short (3-5 minutes) video tours which highlight certain Whyville activities for each subject matter area. These videos allow you to see the "activity in action" so that you can quickly decide whether or not the activity looks compelling for use in your classroom.
